DUELL

*MULTI**MORPHING***
BITIMBRAL SYNTHESIZER

by OSCILL/R

github.com/oscillr/DUELL

Firmware for the M-VAVE FM-1 · free and open source

A bitimbral synthesizer with two independent parts.
Playable in three modes:

LAYER

Both parts combined, with balance, velocity crossfade, and key split.
Perfect for complex sounds and DAWless performances.

DUEL

Dual mono. Part 1 hard left, part 2 hard right.
Fully isolated for use with your external effects.

STEREO

Both parts in one stereo field, obviously.

MORPH A<>B

Glide between two versions of the same patch.
Mad drones, crazy complex results.

A smart randomizer creates new variants
from your starting point.

WAVETABLE

Scan through 26 tables, from classic digital sweeps to growls and reese basses.

Modulate the position, bend and sync with the LFOs and envelopes, through the mod matrix.

NEW

Load your own wavetables.

TABLES

Saw to square, pulse width, organ, vowel, brass, reese, growl, hoover, metal, air and more

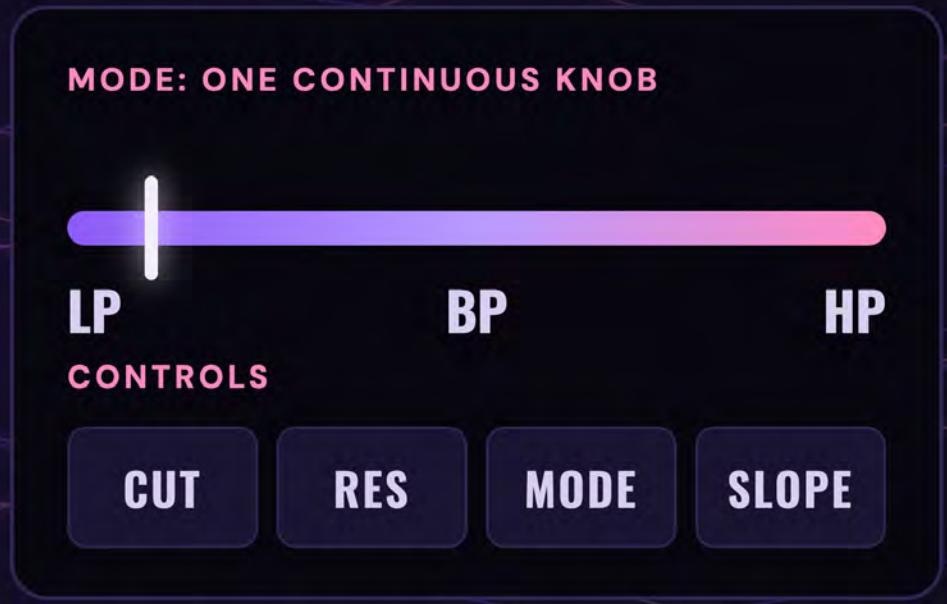

MODULATE

Position, bend, sync, sub, detune

MULTIMODE FILTER

One knob blends smoothly from low-pass through band-pass to high-pass.

Cutoff, resonance and a 12 or 24 dB slope.

PERFORMANCE FX

Hold FX and the 16 keys become effects. Hold a key, the effect plays.

Morph, space, filter and depth on the four knobs.

SPACE adds room as you turn it right: reverb, delay and chorus rise together and the stereo space gets wider. Turn it left and the sound narrows towards mono.

PLAY LIVE

QUICK EDIT

Hold EDIT, LFO, ENV, ARP or GLO for the four knobs you need while playing.

HOLD

Press REC and the keys keep sounding, for pads and drones. Press it again to release.

RESET

Hold OCT- and turn any knob to reset it to its default.

INSERT EFFECTS

Every part has its own insert. Fold it, clip it, crush it or age it.

TAPE · NEW

Wow, flutter, soft saturation and a gentle high cut.

VINYL · NEW

Crackle, dust and a slow warp, in a narrow band.

FOLD and HARD

A wavefolder for metallic harmonics, and a hard clipper for maximum density.

NEW

ADVANCED REVERB AND DELAY

PLATE reverb

A sixth reverb, a classic plate with a wide, soft tail.

LOW CUT

Every reverb can keep the bass out, so low notes stay clean.

RAND and OCT+ delay modes

Repeats that retrigger, reverse or jump an octave, in time with your tempo.

NEW

WEB EDITOR

Both parts, live

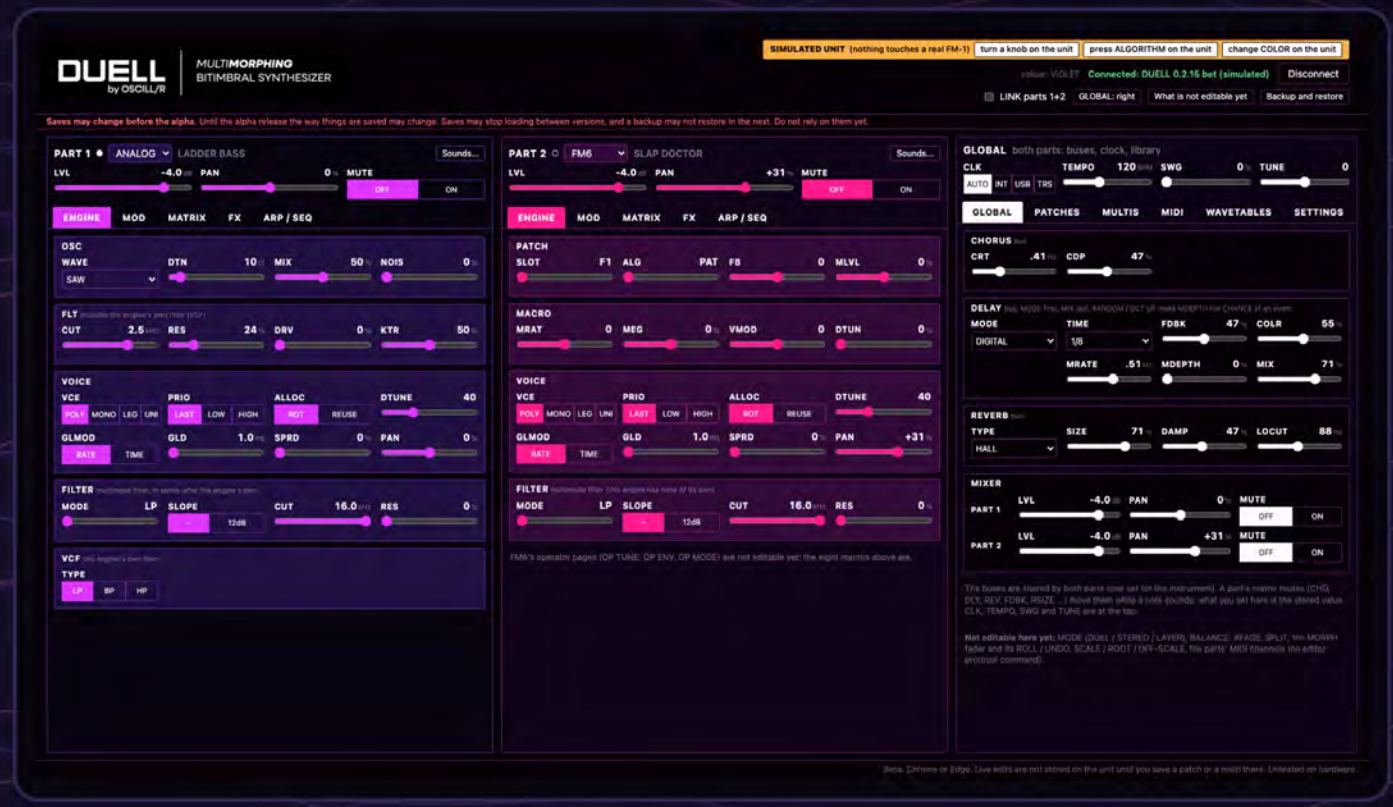

Edit part 1 and part 2 side by side in your browser, while the unit plays.

Your library

Manage your 128 patches, rename them, and back up everything.

Wavetables

Load your own wavetables.

10 ENGINES

ANALOG, PHASE, LOFI, VOICE, TRIO,
WHEEL, PHYS, NOISE, FM6, WAVETABLE

MODULATION

2 envelopes, 2 LFOs, mod matrix with 8 slots

FILTER

Multimode filter: low-pass to high-pass, 12 or 24 dB

PATCHES

128 patches and 16 multis

EFFECTS

Sidechain Ducker, EQ per part, advanced reverbs, ping-pong delay, inserts, and more

MIDI

One channel for each part, clock in, program change, bank select, CC assignments, MIDI Sidechain and MIDI learn

INTERFACE

Revised UI, quick edit, first-start guide

DUELL

*MULTI**MORPHING***
BITIMBRAL SYNTHESIZER

by OSCILL/R

Special thanks to: Felucca and its author Leo Kuroshita, JIANT (reverbs), CHOMPI Club (plate reverb and delay ideas), Emilie Gillet of Mutable Instruments (reverb design), aquanodemusic (a CCO FM voice), Baud Girl (for starting it all), Charles Vestal (XOX), keremimo (Melodee), Quixotic7 (ChoralRoot), zvenson (zp12), isod89 (SLOOP), and the whole community.
